SHIPS

This is where we show our ships off to all those visiting the website I'm thinking 3 ships for 3 different types of missions. Mostly an Earth Orbital Mission which will go up spend 3 days where we orbit the earth for 3 days this and then they will descend. This will by far our most luxurious ship as we will have our loading station very close by so it will be able to use mostly the orbit to keep it going. It will feature things like a pool/hot tub. A great viewing area for showing various places of earth. Exquisite cafeteria and other great amenities.

One of our other most popular Routes is a moon base tripped that will last 7-10 days it will feature a trip to the moon and landing on our moon base resort. Sadly no beaches at this resort but it does allow you to feel the gravity of moon and have open courts like basketball, soccer and other courts available to allow for people to enjoy the feelings of a different gravity.

For our other more dedicated adventures will feature essentially year long trips to Mars and a Half Year mission to Venus. These ships will not be as nice as our other features as these trips will be a lot more about conserving fuel and things such but upon arrival they will be able to treat to much better conditions and on Mars be able to explore the surfaces.

This whole section will be most to showing off various features of the ships and show what kind of amenities they can expect to find on these ships. What they can do in their down time in the ships obviously the longer missions will have more to do than the quick trips but I think it is important for our customers feel comfortable so they don't feel the emptiness of space.

TRIPS: As stated above for now my idea is to offer 4 types of trips

Trip 1: An Orbital Mission. This mission will take off from our base station (a large orbital station as to wear all of our ships and missions are station at.) This short mission last 3-7 days and is a great more affordable option for those who want to go into space and feel the effects of zero gravity. This being one of our more luxurious ships as well this is a great option for everybody and getting comfortable with our way. Which will feature a viewing area as we orbit around the earth in that period landing back at our base station.

Trip 2: In this Mission you follow in the footsteps of Apollo 13 as we take a trip to the moon. These will take 7-14 days as we set out and take a 3 day trip to the moon and land on our moon base here you can jump around at our Fabulous resort.... I mean its ight for being on the moon. There we will stay for a day or so and then head back. Our resort is a big seller here as you can experience the moon walks done by those of Neil Armstrong and experience things like basketball, soccer and hockey with the moon gravity trying to hold you back it will be a brand-new way of playing things as well as a relaxing salon and others as this trip gets more popular.

Trip 3: This will be our first long trip as we head to our closest sister planet Venus. Since the air is toxic and temperatures reaching of 600 degrees Fahrenheit on surface we will be visiting our cloud city that we've set up here this trip will be more for those interested in specifically studying Venus and how we can maybe approach living on here someday but for now the cloud city will have to do as we channel our in Star wars on the planet of Bespin. This trip will be a 7-month Trip as it is a three-month march both there and back. On our extended

flights we offer our variety of shows with our deal though Netflix and also these ships will feature gyms and other things to keep you active so the effects of gravity won't be so bad when you return.

Trip 4: This will probably our last trip as we embark for now. As this will be a Mars based mission this mission will last a total of 2 years(I know crazy like serving a mission to Mars) People for this mission will have to be mentally and physically prepared for these types of mission once there you will land at our Mars Base station and then be shuffled down onto our Mars base(a lot nicer than our Venus mission). Here you can actually get a job and become a Maritain(not in any way required but is an option for those wanting to just travel) The Mars base is cool featuring at this point a living population and a stay at our Resort as you get re-equated with gravity (will be struggle for a lot of people)

Other Things to Mention:

Virtual Trips: These will be our trips for people that don't have the money or want to teach possible students about the adventures in space and get a whole new generation of kids once again excited in space. It will feature live video from our ships as well snapshots and our favorite pictures on our trips and point out space anomalies that you won't see from earth.

Facts Page: This is kind of our FAQ where we discuss things like trips, risks and requirements to go on certain trips as we can't just send anyone to go on a 2 year long space flight.

Bloggers: There are options for people to blog and in a way work for us taking pictures/videos and sharing them via social media those outlines are discussed on a certain page as well so that way they can receive a discount on ticket prices.

Test Groups: Once you have joined our frequent flyers club you can have opportunities to test our new routes and go on trips that others haven't this can also co-exist with our bloggers these are just ideas I'm more or less just thinking off the fly.

Employee: For those looking for an out of world experience we do offer employment at select locations to anyone that is up at either our moon base or Mars base. Only approved persons will be allowed to work at Venus location due to the risks involved. These can be simple maid positions all the way to owning a business on the planet.
